Innvonix

Methodology

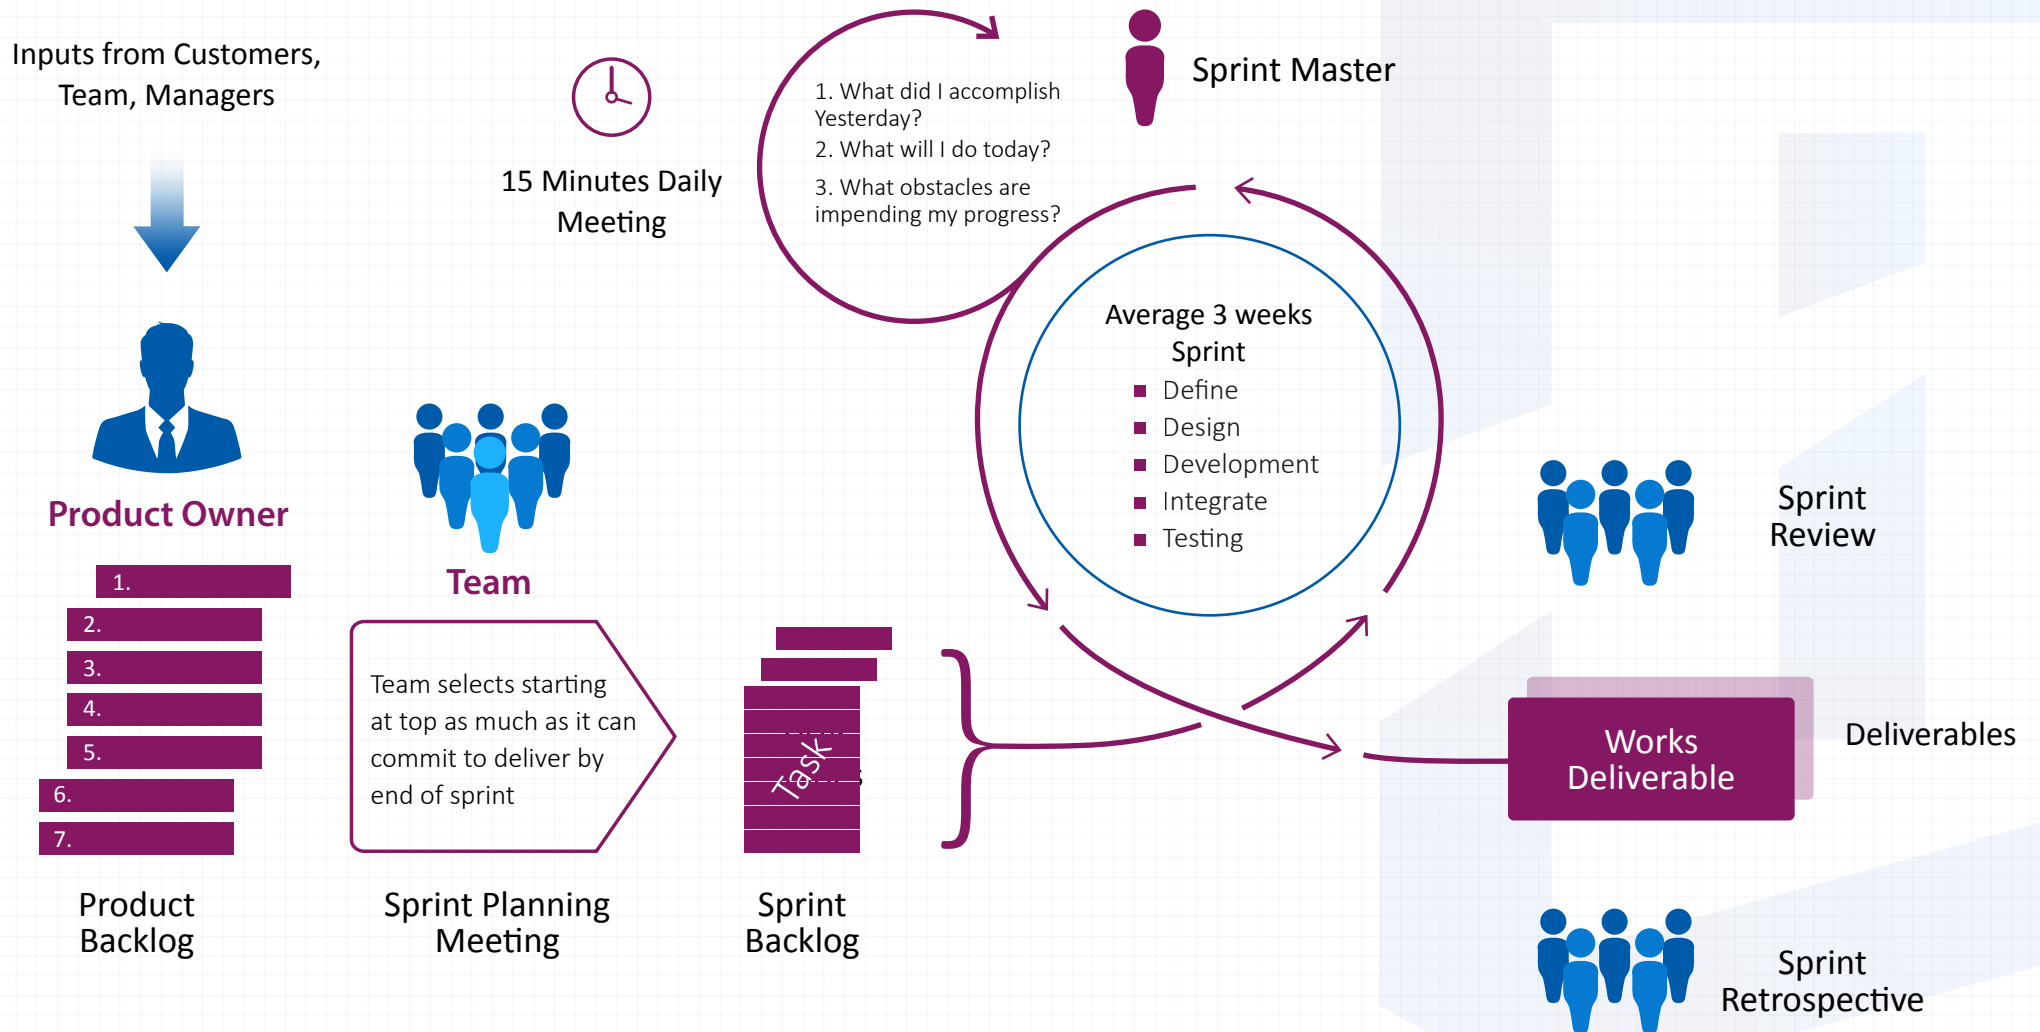

Innvonix's Project Management Methodology

To implement or develop software, methodology plays a vital role. A software development methodology or system development methodology in software engineering is a framework that is used to structure, plan and control the process of developing an information system. Innvonix provides structure **SDLC (Software Development Life Cycle)** methodology to meet our customer requirement. By approaching proper SDLC methodology, depending on project requirement, time, its criticality we help our customer to achieve their goals and help their business grow. Every project and every situation is different, so to choose SDLC methodology, our expert team drives our customers through pros and cons of each methodology and we together come to conclusion to choose the best depending on the situation to meet the customer expectation in term of cost, time and deliverables. We always make a practice to follow each step of SDLC which includes.

Agile with Scrum

We use Agile-Scrum methodology for development as it gives the best result when it comes to robust software development. It focuses on the customer needs at the same time providing timely feedback of work done.

Our Engagement

We at Innvonix understand that no two requirements are same, so it is unfair to use the same pricing model for all projects. Pricing plays a vital role in finalizing service providers and we constantly try to improvise on our pricing models to provide our prospective clients with affordable services without compromising on the quality.

Being into the service industry, where the cost of any software application is directly related to the time and resources invested into it, we constantly look out for innovative ways to achieve desired output in the least possible time to provide affordable pricing structure to our clients. Our transparent pricing mechanisms will ensure that there are no hidden costs later on.

Fixed Cost Project

Time and Material based

Resource hiring

Basics

Based on a specification mentioning the cost as well as deliverables and timelines to ensure that all needs are met within stipulated timeline

When to Choose

Well defined and specified services with relatively lower to medium levels of complexities.

Projects with a little scope for changes and enhancements during execution.

Actively participating clients with a very strong decision making capabilities while providing a strong and regular feedback.

Benefits

Risk mitigation.

Delivery within stipulated time frame

Calculated cost with desired quality.

Milestone for payments

Basics

Based on the cost incurred by the resource utilization in a particular time period

When to Choose

Projects with variable scopes due to which accurate cost estimation is a complex task.

Projects with evolving specifications, emerging technologies and undocumented business processes.

Large scale and complex projects are best executed using this approach.

Benefits

Adequate modification scope during execution

Regular update on process and progress based on which clients can plan forward to squeeze or expand the project.

Resource continuation, knowledge retention and complete control over resources and processes.

Basics

Based on the need for a dedicated pool of IT resources as per the requirement, preference and expectation.

When to Choose

Large scale and complex projects.

Scarcity of good resources.

Inadequate IT skills and rare skill resources.

Hiring & training issues.

High employee attrition rate.

High employee cost and inflation.

Improper utilization of resources

Benefits

Access to a highly competent resource pool having expertise across a range of technologies and industry verticals.

Allows clients to access experienced IT services at a predictable cost in a predictable environment while focusing internal resources on strategic priorities.

Resource continuation, knowledge retention and complete control over resources and processes.
